jpg) with a broad spectrum SPF or equivalent. Either the AHA or BHA is recommended depending on your skin type. If your skin type is normal to combination or oily, a BHA is recommended, as a BHA penetrates deeper into your skin. If you have dry skin, an AHA is recommended, as an AHA will help dry out your skin. If you have sensitive or dry skin, find the right balance of moisturiser and exfoliant to work best for you. I have an AngularJS application which loads a single route: var app = angular.module('ngview', ['ngRoute']); app.config(['\$routeProvider', function(\$routeProvider) { \$routeProvider .when('/page1',

---

`{ templateUrl: 'views/page1.html', controller: 'Page1Controller' }) .otherwise({ redirectTo: '/page1' }); });`  
app.controller('Page1Controller', ['\$scope', function(\$scope) { // Controller stuff here I'd like to perform some asynchronous operation to the page, which may potentially take some time to complete. This could include some server communication (e.g. loading some data from a server). Is it possible to perform this asynchronous operation before page load (e.g. in controller code)? A: By default angular does not provide any asynchronous operation you can perform before page load. If you have to you can put your load operation in oncomplete event of \$routeProvider like .when('/page1', { templateUrl: 'views/page1.html', controller: 'Page1Controller', oncomplete: function() { // 82157476af
